

Signage Field Operations

Demo & Usage Walkthrough for Stakeholders

Prepared for Varun Beverages Limited (RJ Corp)

14 June 2026

Version 1.0 — Confidential

1. What This App Does

The Signage Field Operations app digitises how branded signage (boardings and pamphlet drops) gets surveyed, approved, and installed across retail outlets. It replaces paper checklists and WhatsApp photos with a single, auditable system — every visit is tagged with the employee's GPS location, a live-camera photo, and a timestamp.

The platform connects three groups of people: the RJ Corp head office team that plans the work, the vendor agencies that carry it out, and the field employees who physically visit each store. Work flows top-down (head office assigns to a vendor, the vendor assigns to a person) while proof and approvals flow back up.

Key principles

- **Proof of presence** — photos must be taken with the live camera at the store; gallery uploads are not allowed.
- **Location-stamped** — GPS coordinates are captured automatically at the moment each step is submitted.
- **Full audit trail** — every action is recorded as an append-only timeline entry that cannot be edited after the fact.
- **Head-office approval** — survey findings are reviewed and signed off centrally before any installation happens.

2. Who Uses It — The Three Roles

Role	Belongs to	What they do
RJ Corp Admin	Head office	Sets up vendors and stores, creates tasks, and reviews / approves survey findings. Sees every task across all vendors.
Vendor Admin	Vendor agency	Receives tasks assigned to their agency and re-assigns each one to one of their field employees. Sees only their agency's tasks.
Field Employee	Vendor agency	Visits the store, captures photos and GPS, records the survey or installation. Sees only the tasks assigned to them.

3. The Three Kinds of Field Work

Task type	Purpose	How it ends
Recee (Survey)	An employee visits a store to photograph the wall / space where a board could go and suggests a size.	Goes to head office for approval. On approval, an installation task is created automatically.
Installation (after survey)	Put up the board that was approved — with the brand and size already locked in by head office.	Employee uploads installation photos → marked complete.
Direct Installation	Pamphlet / material drop at an area with a target count — no survey needed.	Employee records the actual count + pincode with photos → complete.

4. End-to-End Walkthrough

The following sequence shows a full cycle — from head office setting up data through to a completed, approved installation on the ground.

1 Head office sets up the basics

- RJ Corp Admin switches to **Admin mode** and opens the **Onboarding** tab.
- **Onboard a vendor** agency (name + unique ID).
- **Add stores** — individually via the form, or in bulk from an Excel sheet (name, address, pincode, lat/long, store UID, contact no.).

2 Head office creates and assigns tasks

- Open **Create Task**: choose **Recee** or **Direct Installation**, pick the target **vendor**, and pick the **store**.
- For Direct Installation, set the **target pamphlet count** and pincode.
- Many tasks at once? Use **Bulk Upload** → **Tasks** from Excel.
- The task is now assigned to the vendor agency, waiting for them to put a person on it.

3 Vendor assigns the task to an employee

- Vendor Admin opens the task and taps **Assign to Employee**.
- They choose any field employee in their agency — the task now appears in that person's task list.

4 Employee performs the survey (Recee)

- Employee opens the task, sees the **store name, address, pincode, UID and contact number**, and taps **Start Recee**.
- They take **multiple live photos** of the space and can **mark on the photo** exactly where the board should be placed.
- They suggest a board size; GPS and time are captured automatically on submit.

5 Head office reviews and approves

- RJ Corp Admin sees the submitted survey, with all photos and markers.
- They **set the brand** and confirm or override the board size, then **Approve** (or Reject with a reason).
- On approval an **Installation task is auto-created** for the same store, with brand & size locked — ready for the vendor to assign.

6 Installation and completion

- The vendor assigns the installation task (can be a different employee).
- That employee installs the board, takes proof photos, and submits.
- The task is marked **Completed** — the full history stays visible on the task's timeline.

5. What You Can See & Track

Every task carries a complete, tamper-evident timeline. Opening any task shows the store details and each step in order — who did it, when, where (GPS), and the photos they captured.

- **Store information** on the task itself — name, address, pincode, store UID and contact number.
- **Survey evidence** — multiple geo-tagged photos with placement markers.
- **Approval record** — who approved, the chosen brand and size, or the rejection reason.
- **Installation proof** — photos and location confirming the board went up.
- **Pamphlet results** — target vs. actual count and pincode for direct-installation work.

Business value at a glance

Before	With this app
Photos over WhatsApp, easy to fake or reuse	Live-camera only, GPS + time stamped at the store
Approvals over calls and messages	Central approval with brand & size locked on record
No reliable history of who did what	Append-only audit timeline per task
Manual tracking in spreadsheets	Bulk upload of stores & tasks, live status per task

This document describes the current build of the Signage Field Operations app prepared for demonstration to VBL stakeholders. Screens and flows shown are live in the application.
