

# Bulk Upload Reference

VBL Signage Platform — spreadsheet columns for each bulk import type

All bulk uploads are **.xlsx** files with a header row (data starts on row 2). Uploads are validated row-by-row (bad rows are reported with a reason; good rows still import) and are **idempotent** — re-uploading skips rows that already exist. Load in this order so references resolve:

**1. Vendors** → **2. Stores** → **3. Users** → **4. Tasks**

## 1. Vendors

Tab: Vendors — privilege: vendor.manage

| Column         | Requirement | Description                    |
|----------------|-------------|--------------------------------|
| name           | Required    | Vendor / company name.         |
| contact_person | Optional    | Primary contact person's name. |
| contact_phone  | Optional    | Contact phone number.          |
| contact_email  | Optional    | Vendor email address.          |

Note: UID is auto-generated as **VND-001, VND-002, ...** — do not include a uid column.

## 2. Stores

Tab: Stores — privilege: store.manage

| Column         | Requirement | Description                                                                              |
|----------------|-------------|------------------------------------------------------------------------------------------|
| name           | Required    | Store name.                                                                              |
| address        | Required    | Full store address.                                                                      |
| pincode        | Required    | PIN code.                                                                                |
| lat            | Required    | Latitude (decimal number).                                                               |
| long           | Required    | Longitude (decimal number).                                                              |
| uid            | Optional    | Store UID. Used as the de-dupe key — re-uploading a row with an existing uid is skipped. |
| contact_no     | Optional    | Store contact phone.                                                                     |
| contact_email  | Optional    | Store contact email.                                                                     |
| contact_person | Optional    | Store contact person.                                                                    |
| vendor_uid     | Optional    | Vendor the store belongs to (e.g. VND-001). Must already exist.                          |

Note: Mapping a store to a vendor lets RJ-admin create tasks by clicking the store (vendor auto-derived).

## 3. Users

Tab: Users — privilege: user.manage

| Column     | Requirement | Description                                                                |
|------------|-------------|----------------------------------------------------------------------------|
| first_name | Required    | Given name.                                                                |
| last_name  | Required    | Family name.                                                               |
| email      | Required    | Login email. Must be unique — rows whose email already exists are skipped. |
| role       | Required    | One of: employee, vendor_admin, vendor_user, rjcorp_admin, rjcorp_user.    |

| Column            | Requirement | Description                                                                           |
|-------------------|-------------|---------------------------------------------------------------------------------------|
| <b>mobile</b>     | Optional    | Mobile number.                                                                        |
| <b>password</b>   | Optional    | Initial password. Defaults to “password123” if left blank.                            |
| <b>vendor_uid</b> | Conditional | Required for vendor-scoped roles (employee / vendor_admin / vendor_user). Must exist. |

Note: Employee/vendor UIDs are auto-generated per vendor & role as **V{vendor}-E001** (employee), **-A001** (admin), **-U001** (user).

## 4. Tasks

Tab: Tasks — privilege: task.create

| Column                       | Requirement | Description                                                                                                               |
|------------------------------|-------------|---------------------------------------------------------------------------------------------------------------------------|
| <b>task_type</b>             | Required    | recee or installation.                                                                                                    |
| <b>installation_type</b>     | Conditional | Required when task_type = installation. direct = Direct Installation (pamphlet); direct_boarding = Boarding Installation. |
| <b>vendor_uid</b>            | Required    | Vendor the task is created against (e.g. VND-001). Must exist.                                                            |
| <b>store_name</b>            | Conditional | Required for recee and boarding tasks. Must match an existing store name.                                                 |
| <b>pincode</b>               | Optional    | Area PIN code (mainly for direct installation).                                                                           |
| <b>target_pamphlet_count</b> | Optional    | Target count — Direct Installation (direct) only.                                                                         |
| <b>brand_name</b>            | Optional    | Boarding only. Must match an existing brand.                                                                              |
| <b>artwork_name</b>          | Optional    | Boarding only. Must be an artwork that belongs to brand_name.                                                             |
| <b>boarding_size_label</b>   | Optional    | Boarding only. Must match a standard boarding-size label.                                                                 |

Note: post\_recee installation tasks are NOT bulk-created — they are generated automatically when a recee is approved.
